

Insect Screening Mesh

Insects, mosquitoes and other undesirable airborne pests are a constant threat to both personal comfort and hygiene.

We stock an extensive range of standard 'Insect Mesh' for screening windows, doors and ventilation areas in homes, offices, hospitals, restaurants and other establishments where there is a potential problem.

UK building regulations now insist upon mesh screening to be fitted above soffit board ventilators, and we are able to supply our standard grades in strip form specifically for this purpose.

All specifications are stocked in roll lengths of 30.5 metres and widths of 1220mm – cut to size pieces can also be supplied.

Insect Screen Standard Specifications

Material Type	Mesh No. (inch)		Aperture (w) mm		Dia (d) mm	Open Area %	Mass (M) KgM2
	Warp	Weft	Warp	Weft
